1. INTRODUCTION

1.1 Software Overview

KaamSetu is a comprehensive service platform designed to bridge the gap between customers and skilled domestic workers. The platform connects users with trusted workers such as maids, cleaners, cooks, drivers, electricians, plumbers, mechanics, and caregivers for their day-to-day household and service needs.

The application supports two primary roles: **customers**, who can post service requests, manage applicants, and communicate with workers, and **workers**, who can browse available jobs, apply based on their skills, and manage their work schedules.

By combining job posting, worker applications, referrals, real-time chat, and status tracking, KaamSetu creates a smooth and reliable experience for both customers and workers. Additional features such as worker referrals, applicant management, and post-completion chat control further improve usability and trust.

1.2 Project Scope

KaamSetu focuses on simplifying the process of hiring domestic and service workers by providing:

1. Job Request Posting

Customers can create service requests by selecting the required category, adding a detailed description, service address, preferred dates, and budget range. This allows workers to clearly understand the job requirements before applying.

2. Worker Applications and Hiring

Workers can apply to jobs that match their skills and availability. Customers can view all applicants, compare worker profiles, and **accept or reject applications** based on their requirements.

3. Referral System

The platform allows workers to refer other trusted workers for jobs. Referred workers are also shown in the customer's applicants list, ensuring that employers can consider both direct applicants and referrals while selecting the best worker.

4. In-App Communication

Once a worker is accepted for a job, a **chat option becomes available**, allowing both parties to communicate regarding work details, timing, and expectations.

The chat remains active only until the job is marked as completed, after which the chat option disappears.

5. Additional Features

The platform also includes worker profile viewing, job status tracking, application withdrawal, worker referrals, and separate pages for **My Applications**, **Applicants**, and **Live Jobs**, improving the overall workflow and user experience.

1.3 Intended Audience

The platform is designed for:

- **Households and customers** looking for trusted domestic workers and service professionals for daily or one-time tasks.
- **Skilled workers** such as maids, cooks, drivers, electricians, plumbers, mechanics, and cleaners seeking flexible work opportunities.
- **Employers and families** who want an organized digital platform to manage service requests, worker applications, referrals, and communication efficiently.

2. ACCOUNT ACCESS AND AUTHENTICATION

2.1 Register as a New User

First-time users can create a KaamSetu account by clicking “**New Here? Register Now**” on the **Login page**.

This redirects the user to the **Registration page**.

The user must fill in the following required details:

- **Full Name**
- **Email ID**
- **Password**
- **Confirm Password**
- **Phone Number**

The **Address field is optional** and can be filled later if required.

Users who wish to register as **workers** must enable the “**Register as a Worker**” checkbox.

Users who want to register as **customers/employers** should leave this checkbox unchecked.

After submitting the registration details, a **4-digit OTP is sent to the user’s registered email ID** for verification.

Once the correct OTP is entered, the account is created successfully, and the user is redirected to the **Login page**.

Registration Page:

Registration Page

2.2 Login

Registered users can access their KaamSetu account through the **Login page** by entering their:

- **Email ID**
- **Password**

After successful login, the user is redirected to the **Live Jobs page**, where all currently available jobs are displayed.

Additional options available on the login page:

- **Forgot Password?** → redirects to the password recovery page
- **New Here? Register Now** → redirects new users to the registration page

This ensures easy access for both returning and first-time users.

Login Page:

The image shows a screenshot of the KaamSetu login page. The page has a blue header with the KaamSetu logo and tagline 'Bridging Opportunities'. Below the header is a white login form. The form has a title 'Login to KaamSetu'. It contains two input fields: 'Enter phone number' with a phone icon and 'Enter password' with a lock icon and a toggle for password visibility. Below the input fields is a blue 'Login' button. At the bottom of the form, there are two links: 'Forgot Password?' and 'New here? Register now'.

Login Page Interface

2.3 Forgot Password

Users who forget their password can recover their account by clicking “**Forgot Password?**” on the **Login page**.

The user must enter their **registered email ID**.

A **4-digit OTP** is sent to the **registered email address** for verification.

After entering the correct OTP, the user is redirected to the **Reset Password page**, where they must enter:

- **New Password**
- **Confirm Password**

Clicking the “**Reset Password**” button saves the new password and redirects the user back to the **Login page**.

Users also have the option to click “**Back to Login Page**” if they do not wish to continue with the password reset process.

Forgot Password Page:

The image shows a mobile application interface for the 'KaamSetu' app. The background is a solid blue color. At the top, the app name 'KaamSetu' is written in white, with the tagline 'Reset your password securely' below it. The main content area is a white rounded rectangle. Inside, the title 'Forgot Password' is centered. Below the title, there is a text input field with an envelope icon and the placeholder text 'Enter your email'. To the right of this field is an orange button labeled 'Send OTP'. Below the email field, there is a blue link that says 'Resend OTP'. Further down, the text 'Enter OTP' is displayed above four empty square boxes for digit entry. Below these boxes are two more text input fields, one labeled 'Set new password' and the other 'Confirm password', each with a lock icon and a toggle eye icon to the right. At the bottom of the white area is a large blue button labeled 'Reset Password'. Below this button, centered, is a link that says 'Back to Login'.

Forgot Password Interface

3. CORE APPLICATION WORKFLOW

Once the user successfully logs in, the **bottom navigation bar** appears across the application interface, allowing quick access to the platform's core features.

The navigation bar remains visible on all major screens after login and contains the following three sections:

3.1 Live Jobs

The **Live Jobs** section displays all currently active jobs available on the platform.

This page allows users to:

- Browse all active job requests
- View job details such as category, description, address, budget, and dates
- **Apply** for jobs that match their skills
- **Refer** other trusted workers for suitable jobs
- Open the **chat option** for accepted applications
- Track ongoing and completed jobs

This section acts as the primary workspace for workers looking for opportunities and for users checking the current status of active requests.

Available Filters

Users can filter jobs based on:

- **Category** → narrows jobs by type such as maid, cleaner, cook, plumber, electrician, driver, etc.
- **Pay** → helps users view jobs within their preferred budget or salary range
- **Schedule** → filters jobs based on preferred working dates, timing, or availability

These filters help workers quickly locate jobs that best match their skills, expected pay, and available schedule, improving the overall usability of the platform.

This section acts as the main job discovery and tracking interface for workers while also helping employers monitor the current status of their active requests.

Live Jobs Page:

Live Jobs Interface

3.2 Post Jobs

The **Post Jobs** section allows customers/employers to create new service requests.

Users can add:

- Service category
- Detailed description
- Address
- Budget range
- Start date
- End date
- No-budget option (if flexible)

Once submitted, the posted job becomes visible in the **Live Jobs** section for eligible workers.

This section is primarily used by customers who want to hire workers for domestic or service-related tasks.

3.3 Account

The **Account** section allows users to manage their personal information and activity within the platform.

Depending on the role, this page includes access to:

- Profile details
- **My Requests**
- **Applicants**
- **My Applications**
- Referred workers
- Accepted and rejected jobs
- Completed work history
- Logout option

This section serves as the central dashboard for tracking user activity and managing profile-related actions.

4. ACCOUNT PAGE FUNCTIONALITIES

4.1 Update Profile

The **Update Profile** page allows users to modify their personal information and professional skills after logging into the platform.

This section helps workers keep their profile updated so they can receive job recommendations that better match their expertise.

Users can update the following profile details:

- **Profile Photo** → users can upload or change their display picture using the “**Change Photo**” option
- **Full Name** → allows editing of the user’s displayed name
- **Address** → lets users update their current location or service area

Worker Tags

The page also provides predefined **worker skill tags**, allowing workers to quickly select their areas of expertise.

Examples include:

- Electrician
- Plumber
- Driver
- Carpenter
- Painter
- Cook
- Cleaner
- Mason

Selected tags are shown separately under the **Selected** section for easy review.

Custom Skill Addition

In addition to predefined tags, users can also add **custom skills** by typing into the “**Add Custom Skill**” field and pressing the **+ button**.

This makes the profile system flexible and allows workers to showcase specialized abilities not covered in the default list.

After making all necessary changes, the user can click “**Save Changes**” to update their profile successfully.

This page plays an important role in improving **job-worker matching accuracy**, since Live Jobs filters and recommendations can use updated worker skills.

4.2 My Applications

The **My Applications** section allows workers to track all jobs they have applied for on the platform.

This page provides a complete overview of the worker's application history and current job progress.

Users can:

- View all previously applied jobs
- Check the **application status** as **Pending, Accepted, or Rejected**
- Track **ongoing and completed jobs**
- Withdraw an application if it is no longer relevant
- Access the **Chat option** for accepted jobs
- View employer or job details for applied requests

This section helps workers efficiently manage their active opportunities and monitor the outcome of their job applications.

4.3 Applicants

The **Applicants** section is available for employers/customers and displays all workers who have applied to a posted job.

This page plays a central role in the hiring workflow.

Employers can:

- View all applicants for a specific job request
- See worker details such as:
 - name
 - phone number
 - selected skills
 - experience tags
- Identify whether an application is a **direct application or referral**
- Use the **View Profile** option to inspect the worker's complete profile
- **Accept or Reject** applicants based on suitability
- Access the **Chat option** once a worker is accepted

Referred workers are also displayed within this section, ensuring that both direct and referral-based applications are managed in a unified workflow.

4.4 My Requests

The **My Requests** section allows customers/employers to manage all jobs they have posted on the platform.

This page acts as the employer's request dashboard.

Users can:

- View all active service requests
- Track request status as **Pending, Ongoing, or Completed**
- Monitor the number of applicants for each request
- Open the **Applicants** page for worker selection
- Edit request details if needed
- Delete a request
- Mark a request as **completed** after the work is finished

This section helps employers manage the complete lifecycle of their service requests.

4.5 Worker Profile

The **Worker Profile** page provides a detailed view of a worker's professional information.

This page is commonly accessed through the **Applicants section** using the **View Profile** option.

The profile includes:

- Profile photo
- Full name
- Address / service location
- Selected worker tags
- Custom skills
- Contact information
- Work history
- Ratings or reviews (if enabled)

This section helps employers make better hiring decisions by reviewing the worker's expertise and suitability for the task.

4.6 Referred Workers

The **Referred Workers** section allows users to view and manage workers who have been referred through the platform.

This page is accessible through the **Account section** and helps maintain visibility into referral-based hiring activity.

Users can:

- View all workers who were referred for available jobs
- Track the **job request associated with each referral**
- Review referred worker details such as:
 - name
 - phone number
 - selected skills
 - work category
- Distinguish referred workers from direct applicants
- Monitor whether the referred worker has been **accepted or rejected**
- Access the related job's **Applicants workflow**

This section helps employers and referring workers keep track of referral-based applications in an organized manner. The **Referred Workers** page strengthens the referral ecosystem by ensuring transparency and easier follow-up of referred candidates.

Referred Workers
Interface

5. CHAT SYSTEM

The **Chat System** enables seamless communication between customers and accepted workers after a job application is approved.

This feature ensures that both parties can coordinate important details such as:

- work timing
- address clarification
- task expectations
- special instructions
- payment discussion
- completion confirmation

The **Chat option becomes visible only after a worker's application is accepted** by the employer.

This restriction ensures that only finalized job participants can communicate, keeping the platform organized and preventing unnecessary messages.

Chat Availability Rules

- The **Chat button appears only for accepted workers**
- Pending or rejected applicants cannot access chat
- Referred workers also **cannot directly chat unless they are officially accepted as applicants**
- Once the employer marks the job as **completed**, the **Chat button disappears automatically**
- Previous messages remain visible inside the chat history for reference

This feature provides secure and role-based communication while maintaining workflow discipline.

Chat Page:

Chat Interface

6. REFERRAL SYSTEM

The **Referral System** allows workers to recommend other trusted workers for jobs that match their skills.

This feature improves job reach and helps employers discover more suitable candidates through trusted connections.

How the Referral System Works

- A worker can click the **Refer** button on a live job
- The worker enters the referred worker's details
- The referred worker is linked to that job request
- The employer can view referred workers in the **Applicants section**
- Referred workers are displayed separately for better identification
- The employer can then **accept or reject** the referred worker just like a direct applicant

This ensures that referrals become part of the normal hiring workflow.

Important Referral Rules

- Only **workers can refer other workers**
- Customers/employers cannot use the referral feature
- Referred workers do **not receive chat access by default**
- Chat becomes available only after the referred worker is officially accepted
- Referred workers are also visible in the **Account section under referred workers**

This feature increases trust, improves worker discovery, and creates a network-driven hiring system.

7. REVIEW SYSTEM

The **Review System** is activated once a job is marked as **completed**.

KaamSetu uses a **two-way rating and feedback mechanism**, allowing both the **employer/customer** and the **worker** to review each other after the completion of a task.

This feature improves platform trust, encourages professionalism, and helps future users make better decisions.

7.1 Employer Reviews Worker

After marking the job as completed, the employer can provide feedback for the worker based on:

- quality of work
- punctuality
- communication
- professionalism
- overall satisfaction

The employer can assign a **rating score** and optionally provide written feedback.

This review becomes part of the worker's profile and can help future employers evaluate their reliability.

7.2 Worker Reviews Employer

Similarly, the worker can also review the employer after the job is completed.

The worker may provide feedback based on:

- clarity of job requirements
- communication quality
- payment behavior
- work environment
- overall experience

This ensures that employers are also accountable and helps workers make informed decisions before applying to future requests.

7.3 Importance of Two-Way Reviews

The two-way review system helps:

- build trust between users and workers
- improve service quality
- reduce bad platform behavior
- improve worker selection decisions
- improve employer credibility

This feature strengthens the reliability and transparency of the KaamSetu ecosystem.

8. DEVELOPERS

The **KaamSetu platform** was designed and developed as part of the **CS253 Software Development Project**.

The application focuses on connecting customers with skilled domestic and service workers through an organized platform supporting **job posting, worker applications, referrals, secure chat, profile management, job completion tracking, and a two-way review system**.

8.1 Team Members

The project was developed by the following team members:

- Ashish Gautam
- Chaniyara Yug
- Harsh Vijay
- Harshit Saini
- Himanshu Yadav
- Ninad Tagade
- Nirajkumar Prasad
- Piyush Ghayal
- Vaidik
- Virag Rathod

8.2 Core Contributions

The project includes contributions across the following major areas:

- **Frontend Development** using React Native and Expo
- **Backend API Development** using Node.js and Express
- **Database Management** using MongoDB
- **Authentication and OTP Verification**
- **Live Job Discovery and Filtering**
- **Worker Applications and Applicant Management**
- **Worker Referral Workflow**
- **Two-Way Chat System**
- **Job Completion and Status Tracking**
- **Two-Way Review and Rating System**

- **Profile Management and Worker Skill Tags**

This user manual documents the complete user workflow and the major features implemented within the platform.

This concludes the KaamSetu User Manual Version 1.0.
